PROFILE

Frontend developer specialized in React Native, with 5+ years of production experience building responsive, multi-platform mobile and web interfaces with React Native, React, TypeScript, and Redux. Delivered UI features for high-traffic consumer apps including a virtual wallet (ClaroPay), a national supermarket chain, and a pharmacy chain. Works daily with UX/UI, backend, and QA teams within agile frameworks, with hands-on experience using modern build tools like Vite. Focused on performance, accessibility, and clean, maintainable code.

CORE SKILLS

- React Native, React, TypeScript, Redux — responsive, multi-platform interfaces
- Modern build tools: Vite, Webpack-based workflows
- Cross-functional collaboration: UX/UI, Backend, QA within agile teams
- REST & GraphQL API integration
- Performance, accessibility, and code quality best practices
- Testing: Jest, Testing Library

WORK EXPERIENCE

Frontend Developer, *Globant*
11/2024 – 10/2026

- Built the React + Vite frontend of an internal AI innovation initiative end-to-end as the sole frontend developer, integrating Gemini and Claude APIs into core product features.
- La Anónima (supermarket app, 1M+ downloads): joined at the start of the project and defined the architecture and navigation of the whole app with React Native (Expo), TypeScript and React Navigation; built the screens with GraphQL and Redux, backed by Jest tests covering ~80% of the app.
- Farmacity (pharmacy app): integrated REST backend services into the prescription-medication purchase flow — prescription upload and validation, invalidating ("burning") each prescription after use to prevent reuse, and a carousel of prescribed medications with similar alternatives when out of stock — using React Native CLI, TypeScript and Zustand, with changes shipped through CI/CD pipelines.
- Worked in a cross-functional team of 6 (frontend, backend, QA, PM) on La Anónima, alongside the frontend lead and mentored by another frontend developer; collaborated with distributed teams across Argentina and LATAM on both apps.
- Drove daily stand-ups, sprint planning, and code reviews with designers, backend engineers, and QA, catching integration issues before release and keeping sprint velocity predictable.
- Coordinated App Store and Google Play submissions alongside the mobile team, preparing builds to avoid release delays.

Frontend Developer, *GlobalLogic*
11/2023 – 11/2024

- Maintained and fixed bugs in the React.js-based CMS powering ClaroPay's content and configuration, enabling the team to push content updates without shipping new app releases.
- Built and shipped features in React Native (Expo) for ClaroPay, a widely used virtual wallet app for Claro customers in Argentina.

- Defined technical solutions for new features by partnering directly with UX/UI designers and backend engineers, translating design intent into implementable architecture.
- Increased user engagement and streamlined in-app navigation by implementing push notifications and deep linking.
- Enforced coding standards across the team through code reviews within a Scrum framework.
- Set up GitHub Actions and Jenkins CI/CD pipelines and introduced SonarQube quality gates, catching code issues before merge.

Frontend Developer, *Global Wizards*
02/2023 – 11/2023

- Built interactive, mobile-optimized interfaces in React Native, prioritizing smooth UX and performance.
- Secured core app functionality and user data by integrating Firebase for authentication and data storage.
- Kept the app stable through proactive maintenance and troubleshooting, resolving issues before they affected users.
- Shaped architecture decisions with the team and upheld code quality through peer reviews.

React Native Developer, *AiMonkey*
04/2022 – 02/2023

- Built new features across frontend (React Native, React.js) and backend (Node.js) for Regatta Fitness, a fitness app that reached 10,000+ downloads.
- Increased content sharing by integrating the GetSocial library for social media sharing functionality.
- Maintained production apps built with JavaScript and TypeScript, resolving issues to keep them stable for end users.

EDUCATION

Full Stack Developer (Desarrollador Web), *Henry*
2020

- Intensive online program simulating a real work environment; trained in full-stack fundamentals (JS, React, Node.js, databases) under production-style deadlines.

TECHNOLOGIES

Languages & Frameworks: JavaScript, TypeScript, React Native, React.js, Next.js, HTML, CSS, Less
State & Data: Redux, Zustand, Context API, REST, GraphQL, MongoDB, Firebase
Styling & Design: Tailwind CSS, Figma
Testing: Jest, Testing Library
CI/CD & Quality: GitHub Actions, Jenkins, SonarQube
Tools & Workflow: Git, GitHub, Jira, Bitbucket, Cursor, Claude Code
Backend: Node.js, Express.js
